

Job Title: AI Engineer

Location: Mohali

CTC: ₹25,000 – ₹60,000 per month

Key Responsibilities:

- Design, develop, and maintain scalable backend systems and RESTful APIs using Python, Django, and Django REST Framework (Models, Views, Serializers, ViewSets).
- Implement secure authentication and authorization mechanisms (JWT, OAuth) with role-based access control.
- Optimize ORM queries, improve database performance, and handle schema design and migrations using PostgreSQL/MySQL; work with NoSQL databases where required.
- Build and manage asynchronous and background processing systems using Celery and Redis.
- Develop and deploy LLM & GenAI-powered applications including chatbots, document Q&A, search, summarization, OCR, and classification systems.
- Integrate and manage APIs such as OpenAI, Azure OpenAI, and Hugging Face in production-ready backend services.
- Perform advanced prompt engineering (prompt design, chaining, system vs user prompts) and implement strategies to minimize hallucinations and validate AI responses.
- Build and maintain RAG (Retrieval-Augmented Generation) pipelines including document ingestion, chunking, embedding generation, similarity search, and contextual prompting.
- Work with vector databases like FAISS, Pinecone, or Weaviate for efficient embedding storage and retrieval.
- Apply machine learning fundamentals, feature engineering, and model evaluation using NumPy, Pandas, Scikit-learn, with basic knowledge of TensorFlow or PyTorch.
- Handle and process large-scale text and embedding data efficiently.
- Collaborate with frontend teams using HTML, CSS, JavaScript, and basic React/Vue for API integration and AI-driven UI features.
- Containerize and deploy applications using Docker, manage version control with Git, and deploy on AWS, GCP, or Azure.
- Manage environment variables, secrets, logging, monitoring, and debugging across environments.

Required Skills:

- Strong proficiency in Python & Django
- Experience with backend development & REST APIs
- Basic understanding of AI/ML and LLM concepts
- Knowledge of SQL & NoSQL databases

- Familiarity with cloud platforms and deployment tools
- Strong problem-solving and analytical skills

Preferred Skills:

- Experience with GenAI applications or chatbots
- Hands-on with RAG pipelines or vector databases
- Understanding of prompt engineering techniques
